

Executive/Board Reporting – Source-to-Board Operating Model (v1_20260128)

Artifacts covered

- ****20220415 Executive Dashboard Board Update_v3.pptx**** – final Board dashboard (quarter-end 03/31/2022; updated 04/15/2022) with executive narrative, enforcement/MR(I)A summaries, and trend visuals. [cite]turn10search1
- ****20220131_Audit Committee_Executive Summary_vF.pdf**** – AC summary: 69% on-time vs. 100% regulatory expectation; 18-24 month closure expectations; themes and data lineage notes. [cite]turn8search1
- ****20220128 MRAOC_Board Update.pptx**** – MRAOC package: oversight operating model, challenge cadence, and practice-evolution timeline. [cite]turn8search3
- ****Management Summary 02-28_corrected.pptx**** – executive dashboard strawman and severity 1/2 views; unmapped population by EMT and phase with source references. [cite]turn8search2
- ****FRB Correspondence Reconciliation_vF.xlsx**** – ****one-time**** early reconciliation illustrating the ***type of work*** required to produce senior reporting (Gold Source/iCAPS alignment, week-over-week snapshots, reopen/retarget checks). Not a recurring artifact and ****does not itself elevate CEO approvals****. [cite]turn9search2
- ****MRA Oversight Reporting – Transition_Draft_v1.pptx**** – BAU transition plan I authored (tasks, POCs, QC, calendars, inputs/outputs, process flow) to institutionalize the reporting cadence. [cite]turn9search1

Executive Summary

- ****What I did:**** I translated fragmented, cross-silo regulatory issue data into ****Board- and Audit-grade reporting**** and then ****institutionalized**** the production model so it could be executed reliably by a BAU team. [cite]turn10search1[turn8search1][turn9search1
- ****What made it hard:**** Under ****tight deadlines and high scrutiny****, seemingly simple metrics (on-time %, long-dated, past-due) required ****nontrivial normalization**** across businesses with different ****processes, naming conventions, and taxonomies****—and rigorous ****definitions/footnotes**** to avoid misinterpretation. [cite]turn10search1[turn8search1][turn8search2
- ****Outcome:**** A defensible, forum-ready narrative (e.g., Q1'22 Board update) supported by traceable source logic, and a ****documented BAU operating model**** that separated ****data prep vs. content****, embedded ****QC****, and synchronized calendars to MRAOC/GBRCC and source distributions. [cite]turn10search1[turn9search1

My Core Contributions

- 1) ****Executive framing & storyboarding (final Board deck)****
 - Anchored the narrative on ****clear definitions**** (e.g., ***past due = original target date***, ***long-dated ≥ 2 years***; ARC excluded from past-due counts) and used footnotes to disclose differences vs. ORM conventions—preventing denominator or definition drift at the Board. [cite]turn10search1
- 2) ****Source alignment & traceability (illustrative one-time reconciliation)****

- Built a **one-time** reconciliation workbook (**FRB Correspondence Reconciliation_vF.xlsx**) to align **Gold Source/iCAPS** and create week-over-week snapshots, status splits (MR/IA/ARC), and reopen/retarget visibility—**illustrating the depth of QC** required to make the executive story defensible. [\[cite?turn9search2\]](#)

3) **Operating-model transition to BAU**

- Authored the **Transition_Draft_v1** deck to move recurring production from “craft build” to **repeatable BAU**: tasks & owners, inputs/outputs, **named POCs**, QC steps, calendars, and a process flow for the **Management/Board Summary Dashboard**. [\[cite?turn9search1\]](#)

How I handled pressure, ambiguity, and complexity

- **Tight deadlines & intensity**: Compressed quarter-end timelines demanded **fast** but **precise** calls on scope (e.g., excluding ARC from past-due), with **footnoted rationale** so reviewers could challenge without derailing timelines. [\[cite?turn10search1\]](#)

- **Cross-silo normalization**: I reconciled **inconsistent taxonomies and processes** across businesses/functions to a **single management view** (e.g., MR/IA/ARC phases; long-dated and past-due logic), reducing rework during senior reviews. [\[cite?turn8search2\]](#)

- **Attention to detail**: Where near-cutoff figures diverged (e.g., small changes in open or extension counts across adjacent snapshots), I maintained **week-over-week trails** and called out timing/definition drivers to preempt questions. [\[cite?turn9search2\]](#)

Evidence Highlights (from artifacts)

- **Board-final view (Q1'22)**: Consolidated enforcement/MR(IA) summaries with explicit **definition boxes** and quarterly commentary; quarter-end **03/31/22**, updated **04/15/22**. [\[cite?turn10search1\]](#)

- **Reconciliation workbook (illustrative)**: “Current Week 12.10.21” (~153 rows) and “Previous Week 12.03.21” (~155 rows) status tabs; “Current ICAPS Extract” (~391 rows); **phase splits** and **addenda** used to validate executive counts. **One-time exercise** to stand up the logic. [\[cite?turn9search2\]](#)

- **BAU transition**: Task matrix, POCs, QC activities, production calendars tying **Gold Source, IA BUR, Enforcement, MRAOC, GBRCC**, plus a **dashboard process flow**. [\[cite?turn9search1\]](#)

Clarifications & Boundaries (to avoid misattribution)

- The **reconciliation workbook** was a **one-time build** to illustrate and validate the normalization/QC workload required for executive reporting; it is **not** a recurring control or a vehicle that “elevated” CEO approvals. (CEO-level extension approvals are communicated in executive packages, not the workbook.) [\[cite?turn9search2?turn8search1\]](#)

- Executive materials are issued under the **MRA Oversight Function** without named

slide-level authorship; this summary attributes ****data/QC and BAU transition**** work to me based on the artifacts above. [cite]turn8search3[turn9search1]

Interview Angles to Emphasize

- ****Operating under pressure:**** Quarter-end delivery with ****high stakes****; how I balanced speed with ****definition discipline**** and ****footnoted nuance****.

[cite]turn10search1

- ****Data normalization mastery:**** Bridging ****siloeed taxonomies**** into a ****coherent management/Board view****—why it's hard, how to document assumptions, and where to insert QC and challenge. [cite]turn8search2

- ****Institutionalization:**** Turning a “hero project” into ****repeatable BAU**** with clear ****roles****, ****inputs/outputs****, and ****calendars****. [cite]turn9search1

****Prepared:**** January 28, 2026 (ET)
