Role & Context

In Q4-2021, I **owned and led** the **MRA Remediation Reporting Design Council** workstream to define Citi's MRA reporting operating model (Reports **A/B/C**), standardize data lineage and QC, and set a sustainable cadence that ties **systems of record** (PTS, ICAPS, RET) to **Gold Source** month-end snapshots with **weekly** refreshes for executive governance. I authored and presented the **10/1**, **10/26**, and **11/23** Council packs and facilitated cross-functional decisioning (Oversight Function, ORM, IA).

My Core Contributions

1. **Reframed the strategy to reduce manual risk and increase signal**

- Ran the early **Status Report C** pilot, synthesized the "moderately successful but **too manual**" outcome, and **proposed** a pivot: pause the interim C process, give Oversight **system access**, stand up a **Weekly MRA Oversight Tracker**, and use a **curated Committee template** for deep-dives; my manager made the final call. I wrote the justification and secured alignment.

2. **Defined the information architecture and QC approach for B/C**

- Drafted the **field inventory**, sourcing logic, and locking rules (pre-populated, **SoR-sourced** fields; minimal free text), set **refresh frequency** (weekly + month-end), and documented **success criteria** and **quality-check** decision matrices for Oversight adoption.

3. **Built the operating mechanics**

- **Constructed** the **Weekly Oversight Tracker** and the **Committee presentation template**; computed **program-metric baselines** to inform targets and cadence.

4. ****Drove Council facilitation and adoption path****

- Set agendas/cadence, captured decisions/open questions, and socialized the ****Status Summary (B)**** construct for Oversight Committee use. Subsequent records document my ****ownership/transition**** of the ****Status Summary****, ****Oversight Tracker****, and ****program metrics**** into BAU in 2022.

Key Behaviors Demonstrated

- ****First-principles problem framing****: Oriented the objective toward ****intervention**** (not just monitoring), which justified the system-driven model plus curated deep-dives.

- ****Controls & data-lineage rigor****: Enforced ****pre-populated, locked**** fields and SoR sourcing to reduce EUC-type risk and enable QC.

- ****Structured facilitation under ambiguity****: Pilot → critique → redesign loops; decision question matrices and success criteria to drive closure.

- ****Influence without sign-off rights****: Facilitated consensus (Oversight lead, ORM, IA), with final managerial decisions as appropriate.
