

AI Summary – CAO-XIIE.10.3 Sustainability & Testing Results

****Date:**** 2026-01-28

****Work Sample:**** CAO-XIIE.10.3 – Sustainability and Testing Results Summary.pptx

****Milestone:**** RBCM 10 – Execute Phase Requirements

****User Role:**** Primary Author • Testing Lead • Workstream General Manager

1. Role & Context

As the ****primary author**** and ****workstream general manager****, I led the sustainability testing effort for ****CAO-XIIE.10.3****, which required Citi to demonstrate that execute-phase requirements for Unmapped MRAs were ****implemented and sustainable****.

This included testing ****19 of 24 execute-phase requirements****, using a defined sample of ****4 Unmapped MRAs**** selected per the ****Global Issue Management Procedure****, and preparing the full sustainability evidence package for governance review.

[1](https://citi-my.sharepoint.com/personal/dm61019_citi_com/_layouts/15/Doc.aspx?source=7BF845BFEA-C017-4AA3-8EAD-7CF257879B02&file=CAO-XIIE.10.3%20-%20Sustainability%20and%20Testing%20Results%20Summary.pptx&action=edit&mobileredirect=true)

My scope did ****not**** include defining the underlying project-management requirements; it began at ****test approach definition****, ****testing oversight****, ****evidence QA****, and ****construction of the closure wrapper****.

2. My Core Contributions

****2.1 Designed & Led the Testing Approach****

- Led cross-functional working sessions to define the ****testing strategy****, including sampling factors, applicability rules, and N/A dispositions.
- Ensured consistency with the broader Article XII.1.e program's established sampling methodology.

- Applied policy-guided minimum sample sizing and judgment-based selection to ensure variability across ****functions****, ****regulators****, and ****lifecycle stages****.

****2.2 Directed and QA'd All Testing Execution****

- Oversaw the team performing the execution-phase testing, validating all ****Pass/Fail/N.A. outcomes****.
- Conducted ****final quality assurance**** across all evidence repositories including ****RET****, ****iCAPS****, and ****PTS****.
- Verified that testing captured compliance gaps highlighted in the deck, such as:
 - Late status-update entries (>30 days) in ****RET/iCAPS****,
 - Missing ****PTS dependency**** documentation, and
 - Inconsistent documentation of execution-forum attendance and follow-ups.

urcedoc=%7BF845BFEA-C017-4AA3-8EAD-7CF257879B02%7D&file=CAO-XIIE.10.3%20-%20Sustainability%20and%20Testing%20Results%20Summary.pptx&action=edit&mobileredirect=true)

2.3 Authored the Entire Sustainability Deliverable

- Drafted all analysis, test results, sampling narratives, lessons learned, next-steps, and remediations.
- Created an executive-ready storyline for governance consumption.
- Prepared the **closure wrapper** and underlying evidence index for sponsor approval.

2.4 Drove Stakeholder Alignment & Governance Engagement

- Presented results to the **IA/ORM Forum** and **Program Group Forum (PGF)**.
- Scheduled and led sessions with **Global Regulatory Engagement (GRE)** and the **MRA Oversight Function (MRAOF)** to socialize findings and confirm BAU ownership for remediation and monitoring.
- Secured governance alignment for addressing recurring issues such as RET/iCAPS timeliness and documentation quality.

2.5 Delivered Sustainability Testing On Time

- Submission met formal sustainability deadlines.
- Any internal claims of lateness relate only to **non-regulatory internal milestone dates**, not actual sustainability timing.

3. Key Behaviors Demonstrated

- **Ownership:** Full end-to-end responsibility for testing accuracy and evidence quality.
- **Analytical Rigor:** Validated cross-system evidence and ensured results aligned with regulatory expectations.
- **Structured Communication:** Created clear, concise executive-grade materials.
- **Stakeholder Influence:** Drove alignment across IA/ORM, GRE, MRAOF, PGF.
- **Risk Mindset:** Identified and elevated systemic control risks (e.g., RET timeliness).

4. Skills to Highlight in Interviews

- Sustainability testing design and governance
- Regulatory execution across multiple systems of record
- Evidence QA and documentation control
- Cross-functional leadership without formal authority
- Executive-level communication & storyline development
- Delivering under tight regulatory deadlines

5. Credibility Notes

- Requirements design was **not** in scope; contributions begin with **sustainability testing and closure-wrapper preparation**.

AI Summary - CAO-XIIE.11.3 Sustainability & Testing Results

****Date:**** 2026-01-28

****Work Sample:**** CAO-XIIE.11.3 - Sustainability and Testing Results Summary.pptx

****Milestone:**** RBCM 11 - Close Phase Requirements

****User Role:**** Primary Author • Testing Lead • Workstream General Manager

1. Role & Context

I served as the ****primary author****, ****testing lead****, and ****workstream manager**** for the sustainability testing under ****CAO-XIIE.11.3****, which required Citi to demonstrate implementation of ****Close-phase**** requirements for Unmapped MRAs. Testing covered ****8 close-phase requirements**** (4 testable during sustainability) across ****8 Unmapped MRAs****, accounting for ****effective-date constraints****, ****retargets****, and MRAs not yet reaching the Close phase.

[2](https://citi-my.sharepoint.com/personal/dm61019_citi_com/_layouts/15/Doc.aspx?sourcedoc=%7B7146D229-3B9B-4B29-8E5D-83141A59CDC8%7D&file=CAO-XIIE.11.3%20-%20Sustainability%20and%20Testing%20Results%20Summary.pptx&action=edit&mobileredirect=true)

Due to resourcing shortages, I ****personally executed most of the testing****, in addition to all synthesis and documentation responsibilities.

2. My Core Contributions

****2.1 Led Interpretation & Applicability of Close-Phase Requirements****

- Facilitated working sessions to determine which close-phase requirements were testable during the sustainability period.

- Established N/A rationales for items such as:

- Requirements not yet effective during testing,
- Requirements covered under other frameworks (e.g., PM Quality Framework),
- Requirements where retroactive testing would yield little value.

[2](https://citi-my.sharepoint.com/personal/dm61019_citi_com/_layouts/15/Doc.aspx?sourcedoc=%7B7146D229-3B9B-4B29-8E5D-83141A59CDC8%7D&file=CAO-XIIE.11.3%20-%20Sustainability%20and%20Testing%20Results%20Summary.pptx&action=edit&mobileredirect=true)

****2.2 Personally Executed the Majority of Testing****

- Conducted detailed evidence checks across ****RET****, ****iCAPS****, ****PTS****, forum documentation, and work-effort artifacts.
- Identified the single testable failure (RET 30-day updates) and validated that GRE had an established monitoring/escalation mechanism.
- Ensured all test results were accurately documented and traceable.

****2.3 Authored the Full Sustainability Deck & Closure Wrapper****

- Wrote the complete sustainability narrative, including test methodology, sample rationale, applicability grid, test results, and lessons learned.
- Compiled the official ****closure wrapper**** for sponsor approval, ensuring full evidence traceability and control alignment.

2.4 Orchestrated Governance Alignment & BAU Transition

- Presented sustainability results to the **IA/ORM Forum** and **Program Group Forum (PGF)**.
- Held targeted sessions with **GRE** and **MRAOF**, securing ownership for BAU monitoring and remediation of identified issues.
- Ensured that GRE would maintain oversight of RET-timeliness gaps, and that MRAOF would reinforce Close-phase documentation expectations.

2.5 Delivered Sustainability Testing On Time

- Met the formal sustainability-period deadline for 11.3 even while operating under constrained staffing.
- Maintained accuracy and control discipline despite tight turnaround.

3. Key Behaviors Demonstrated

- **Independent Execution:** Personally completed most of the testing with minimal support.
- **Analytical Judgment:** Interpreted applicability under complex timing/phase conditions.
- **Governance Leadership:** Communicated results to IA/ORM and PGF with clarity and precision.
- **Risk & Control Focus:** Ensured identified deficiencies were routed to proper BAU owners.
- **Resilience Under Pressure:** Delivered a high-quality, regulator-ready package under significant workload.

4. Skills to Highlight in Interviews

- Sustainability testing for regulatory closure
- Evidence evaluation across multiple systems of record
- Control-framework interpretation and applicability analysis
- Independent execution under constrained resources
- Executive-ready communication and documentation
- Governance alignment & escalation management

5. Credibility Notes

- Requirements design for the Close phase was **not** in scope; contributions are limited to sustainability testing, documentation, and governance alignment.
- No specific pushback examples included due to lack of recalled detail.
